

ANIMAL HEALTH, NUTRITION & TECHNOLOGY INNOVATION LATAM

INNOVATION SHOWCASE FINALISTS 2023

Kisaco Research is proud to announce the 9 companies selected to present at Animal Health, Nutrition & Technology Innovation LatAm on September 13-14 in São Paulo.

PRODUCTION ANIMAL

ALGABLOOM

SERIES A

We promote animal health and well-being through algae rich diets that act in the organism increasing the growth and immune response of animals in a natural way, reducing the use of chemicals and antibiotics. We've developed the whole production technology, from cultivation to the processing of the biomass, that guarantees the higher nutritious value and allows us to deliver our product to wherever our clients are. Microalgae synthesize molecules that can be used as animal feed and as nutraceuticals.

BASTÓ

SEED

BASTÓ's purpose is to regenerate the world's soils, transforming livestock production. We develop IOT solutions that allow scaling Regenerative Livestock models to make them more efficient, profitable and sustainable. Our mission is to accompany producers to reduce the impact of greenhouse gases, through real-time information that influences decision-making based on Good Farming Practices, allowing to increase carbon capture.

EMGENISYS

SEED

EmGenisys' flagship product is a SaaS solution offering a noninvasive analysis of embryo morphokinetic activity (cellular activity) to improve pregnancy outcomes of assisted reproductive techniques (embryo transfer, in vitro fertilization and cloning) in livestock. EmGenisys has developed EmVision, a web-based platform (app.emgenisys.co) which allows a non-invasive and objective evaluation of embryo health in real-time. Using our system can provide veterinarians and embryologist with the objective data they need to manage their breeding strategy and improve pregnancy outcomes 20%.

PRODUCTION ANIMAL

TERRANOVA

SERIES A

TerraNova is a startup focused on the development, service provision, sale, and rental of environmental disinfection equipment in industries that require high microbiological control. Our equipment is manufactured in-house with high technology and designed to perform disinfection in critical areas. They operate using DryFog technology, a dry mist that ensures disinfection in large, medium, and small-sized areas, on different surfaces, within a short period of time, at various temperatures, and without the need for rinsing. This helps prevent damage to other electronic devices, furniture, and utensils. In addition, we offer microbiological analysis services by collecting samples from the environment before and after disinfection, sending them for laboratory testing, and providing reports that depict the microbiological health of the area, both pre and post-application of the sanitizing product.

UBI MEATS

SEED

UBI is a meat grading and monitoring platform that leverages artificial intelligence and machine learning, allowing meat processors to measure and document quality assurance.

We've built decision-grading software that allows meat processors to assure document quality standards like marbling scores and the percentage of fat on meat trimmings in real-time.

COMPANION ANIMAL

BIDIAGNOSTICS

SERIES A

Companion animals frequently present fungal infectious diseases such as dermatitis and other mycosis. One example of an emerging fungal disease with high mortality for domestic cats is Sporotrichosis, caused by a new species discovered in the last decade. Dogs are also susceptible to this new fungus. Early diagnosis means a precise treatment and a good prognosis. There is a need in the field of Diagnostic Medicine for Point of Care diagnostic tests for the rapid and precise diagnosis of fungal diseases. In addition, fungal and bacterial pathogens main antigens (diagnostic markers) are glycoconjugates, in other words, a new generation of complex carbohydrate molecules are the technological, present and future, of diagnosis and vaccines for these pathogens. We are a startup dedicated to developing diagnostic solutions (rapid tests) for fungal infections of domestic animals.

LUNA PETS

PRE-SEED

Luna Pets is a marketplace for pet care services that provide dog walks, pet sitting, pet airbnb, insurance and at-home vet care. All of our caretakers are screened, verified and go through a background check to insure quality care for our clients. A mobile app that allow the matching of pet care providers and pet owners depending on their location, preference, necessity and availability.

SMART SOUND

SERIES A

Based on our core “Sound Processing Technology”, we develop IoT-based Smart Devices by combining various sensors that can measure human and pet sounds vital signals. Now, we will enable transmission of the measured “Sound Vital Signal Data” to Cloud Server (Big Data) and provide a conversion diagnosis platform service with AI/ Deep Learning Technology.

1. Skeeper - AI Stethoscope for Human
2. WITHaPET - AI Stethoscope for Pet

ZAZUU

SEED

Brazil is the second largest market in the world in number of pets. Monthly spending is increasing, as pet parents want to provide pets the same kind of treatment they have. zazuu is a groundbreaking digital platform created in 2020 to help pet parents take care of their pets in a reliable and convenient way. We connect best-in-class professionals with those who want the absolute best for their pets, offering grooming and veterinary solutions at their door.

A special thank you to the **SELECTION COMMITTEE**

The Selection Committee members were responsible for selecting the Innovation Showcase finalists at Animal Health, Nutrition & Technology Innovation LatAm. Each of our committee members has an extensive breadth of experience and knowledge across the industry.
